

What data are available?

LAMHA Parent Mental Health Survey

This survey includes questions from the Child Behavior Checklist, modified PTSD Symptom Scale for adults, CES-D, PRIME-MD, Clinical Depression Scale, and the K3 Psychological scale. Additional data include information on immigration experience, social support, educational background and socio-economic background (n=283).

LAMHA Adolescent Mental Health Survey

This survey includes questions from the Youth Self-Report, the Trauma Symptom Checklist for Children, Children's Depression Inventory, and the Multidimensional Anxiety Scale for Children. Additional data include information on pre-migration experience, acculturation, discrimination experiences, and school experiences (n=283).

LAMHA Service Use Survey

This is a survey of health service use patterns adapted from the Child and Adolescent Assessment (CASA) and completed by approximately half of the parent sample (n=151).

LAMHA Health Belief Interview Data

These data examine the mental health beliefs of 14 primary caregivers.

LAMHA Adolescent Interview Data

These data examine the migration and acculturation experiences of 20 Latino youth.

All requests for LAMHA Project data should be mailed to

Latino Adolescent Mental
Health Adaptation

What is the LAMHA Study?

The Latino Adolescent Migration, Health, and Adaptation Project (LAMHA) is a mixed-method, descriptive study of the mental health status and needs of immigrant youth and their families.

The study seeks to contextualize mental health symptoms by examining migration stories and experiences as well as current community and school variables. The data allow researchers to examine mental health symptomatology among Latino immigrant youth and their primary caretakers in North Carolina, a state where there has been a tremendous increase in first-generation immigrants.

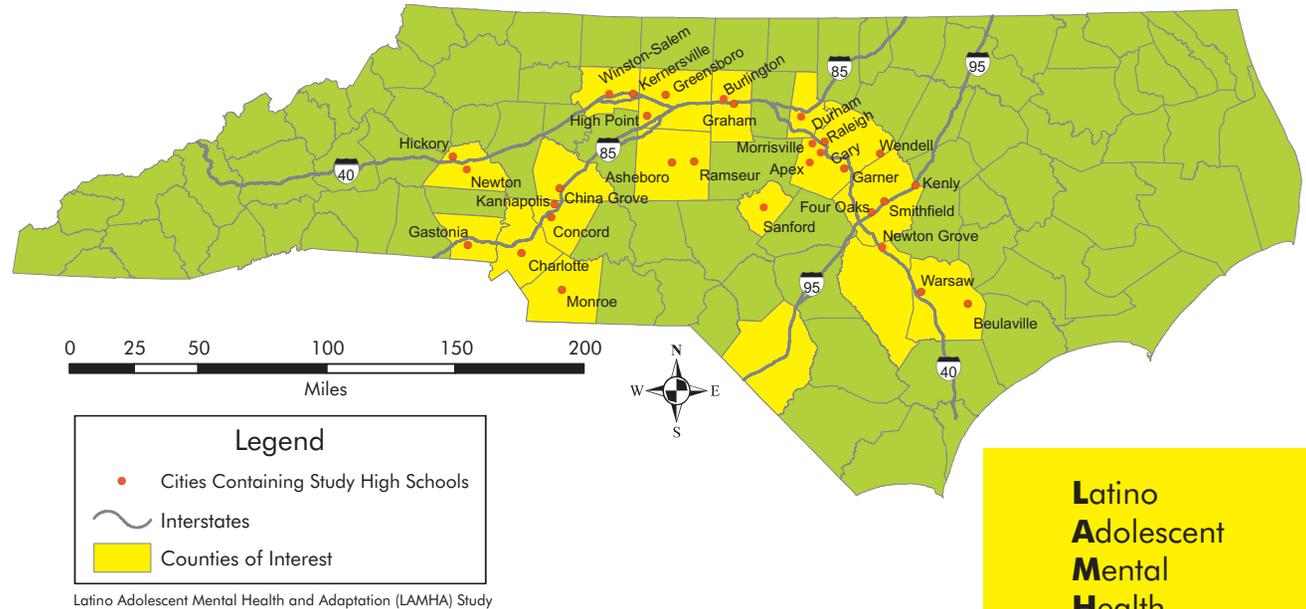

The LAMHA project is the first population-based study of mental health among Latino youth (ages 12-18) in a state with an emerging Hispanic community. Data were collected through a random sample and represent Latino youth living in North Carolina.

How can I obtain the data?

LAMHA data will be available in a restricted-use contractual dataset. It is a central concern of the LAMHA project that the confidentiality of participants be strictly protected. For this reason, the distribution of data will be limited and deductive disclosure concerns prevent full access to all data sources.

A copy of the contract use data application for the LAMHA project can be downloaded at: www.unc.edu/projects/LAMHA
